SUMMARY

Infrastructure engineer with 3+ years of full-time experience designing and running the apps, servers, networks, and security for a small business. Strong in Python, networking, and automation; builds embedded, robotics, and computer vision projects in my own time. Dual-enrolled in high school and college computer engineering coursework. Seeking a junior DevOps, systems, or infrastructure role in Michigan or fully remote.

EXPERIENCE

Infrastructure Engineer, ADR Services LLC - *Jun 2023 - Present*
New Baltimore, MI | Full-time, hybrid

- Designed and coded the company's apps and servers from scratch.
- Managed IT and all tech infrastructure, including all cybersecurity.
- Integrated new systems with legacy systems so existing workflows kept running.
- Automated long, difficult manual tasks into short, easy-to-use tools.

Freelance Web and Server Consultant - *Self-employed*

- Built websites for clients; audited existing sites for business owners to find problems and make them run more efficiently.
- Upgraded and scaled client server setups with zero downtime.

PROJECTS

picommand - *FastAPI, PostgreSQL, Redis*

- Dashboard for managing a fleet of Raspberry Pis across multiple networks.
- Solved secure connectivity between Pis on different networks without opening any ports.

Drone Tracker - *YOLOv8, CoreML, MAVLink*

- Real-time object detection and tracking from a drone camera; my most noticed project (people have emailed me about it).
- Fine-tuned YOLOv8 and ran it in real time on Apple's Neural Engine, connected to the flight controller over ArduPilot/MAVLink.

Car ECU Tool (OBD-II) - *C++*

- Tool that talks to an engine computer over OBD-II: seed/key unlock, firmware read and dump, flashing, and vehicle control.

ROS 2 in Rust - *Rust*

- Reimplementation of ROS 2 components in Rust.

Other

- Pip, a coding habit tracker built as a digital pet (React, SwiftUI); multiple finished video games; reverse proxies and networking tools built from scratch.
- Run home test and production servers to test everything before it goes live.

SKILLS

Languages: Python (strongest), C#, JavaScript/HTML/CSS, C++, Rust, Swift, SQL (MariaDB, PostgreSQL), Go (basic)
Infrastructure: Linux servers, test/prod environments, automation, legacy system integration, Git/GitHub
Networking: All layers, VLANs, reverse proxies, secure connections between networks
Security: Server and website auditing, reverse engineering, cybersecurity
People: Explaining technical topics in plain language, helping users, teamwork

EDUCATION

Dual enrollment: College coursework in Computer Engineering - *In progress*

L'Anse Creuse High School North, Chesterfield, MI - *Expected 2028*

- Honors cord in Programming and Game Design; regular community volunteer.
